

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

- 5 1. (currently amended) A method for forming a light emitting diode comprising following steps:
forming a first stack;
forming a second reaction layer over said first stack;
forming a second stack;
10 forming a first reaction layer over said second stack; and
holding together said first reaction layer and said second reaction layer by means of a transparent adhesive layer;
wherein the first and second reaction layers each comprise material selected from a group consisting of SiNx, Ti, and Cr; and metal
15 the transparent adhesive layer comprises at least one material selected from a group consisting of PI, BCB, and PFCB.
2. (original) The method of claim 1 wherein the step of forming a first stack comprises following steps:
20 providing a first substrate;
forming a second contact layer on the first substrate;
forming a second cladding layer on the second contact layer;
forming an emitting layer on the second cladding layer;
forming a first cladding layer on the emitting layer;
25 forming a first contact layer on the first cladding layer; and
forming a transparent conductive layer on the first contact layer.
3. (original) The method of claim 2 further comprising following steps:
removing the first substrate;
30 etching the second contact layer, the second cladding layer, the emitting layer, first cladding layer, and the first contact layer; and

forming a first electrode on the second contact layer, and a second electrode on the transparent conductive layer.

4. (original) The method of claim 2 wherein the first substrate comprises at least one material selected from a group consisting of GaP, GaAs, and Ge.
- 5
5. (original) The method of claim 2 wherein the first contact layer and the second contact layer each comprise at least one material selected from a group consisting of GaP, GaAs, GaAsP, InGaP, AlGaInP, and AlGaAs.
- 10
6. (original) The method of claim 2 wherein the first cladding layer, the emitting layer, and the second cladding layer each comprise AlGaInP.
7. (original) The method of claim 2 wherein the transparent conductive layer comprises at least one material selected from a group consisting of indium tin oxide, cadmium tin oxide, antimony tin oxide, zinc oxide, zinc tin oxide, BeAu, GeAu, and Ni/Au.
- 15
- 8-9. (cancelled)
- 20
10. (original) The method of claim 1 wherein forming a second stack comprises forming a second substrate.
11. (original) The method of claim 10 wherein the second substrate comprises at least one material selected from a group consisting of SiC, Al₂O₃, glass materials, quartz, GaP, GaAsP, and AlGaAs.
- 25
12. (previously presented) The method of claim 1 wherein said first reaction layer and said second reaction layer are held together with the transparent adhesive layer by chemical bonds.
- 30
13. (original) The method of claim 12 wherein the chemical bonds are hydrogen bonds

or ionic bonds.

14-15. (cancelled).
